

## REYNAERS SLIM LINE ALUMINIUM SYSTEM

A thermally broken system for both inward and outward opening windows and doors. This system combines high comfort, superior performance, and a super slim design. It is suitable for new-build houses, as well as a modern alternative/replacement to steel frame windows and doors.

The RSL Reynaers Slim Line system is a thermally broken system for both inward and outward opening windows and doors, which combines high comfort, superior performance, and a super slim design. Its steel-look design is reminiscent of old slim-style windows, yet fulfills the highest modern-day thermal requirements. The combination of these features results in a unit which serves as a solution for both modern architecture and windows as well as retrofits, loft conversions, and many other types of projects.

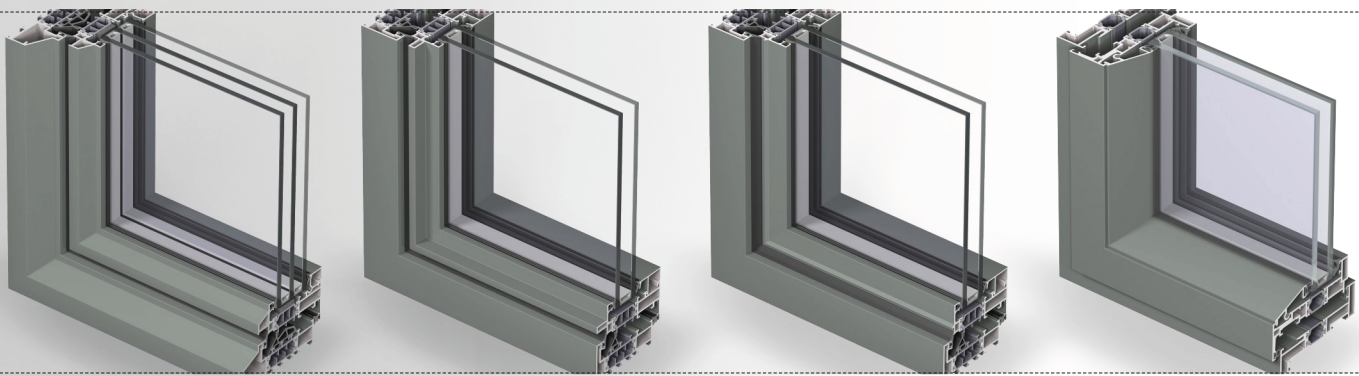

Both windows and doors can be provided with double and triple glazing, all the time without losing their ultra-slim look. A unique aspect of this system is that it can also comply with anti-burglary resistance hardware, offering a safe and secure solution for clients who demand an extra level of security.

The clean design of the RSL system fulfills the highest and most demanding architectural requirements.

The RSL system is available in four different minimalistic design variants:

## REYNAERS SLIM LINE ALUMINIUM SYSTEM

SL 38 Classic

SL 38 Ferro

SL 38 Cubic

CS 24 Concept

$U_w=0,7-1,4 \text{ W/m}^2\text{K}$

$U_g=0,5-1,1 \text{ W/m}^2\text{K}$

$R_w=$  From 38dB to 45dB

Water tightness: 9A ( 600Pa)

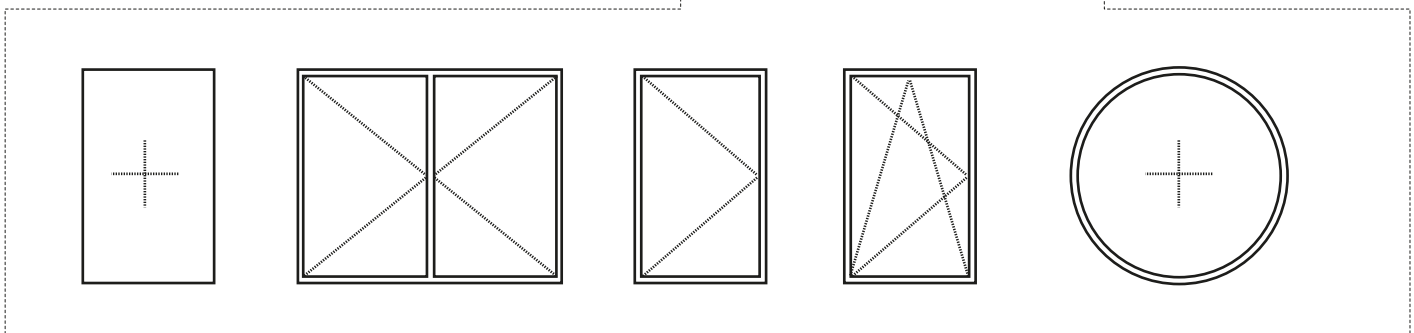

Wind load resistance: 4 (1600 Pa)
